

Issues Document

1. viewport meta element was not specified on all pages.
2. The <head> tag was missing <meta charset="UTF-8"> and a <meta name="description">.
3. The HTML tag was declared with not language attribute <lang="en"> which caused validation error.
4. Errors found on the image tags do not have title attributes and a that clearly describe the image.
5. Navigation was missing causing a break between pages, so I used <nav> elements together with <a> tags to ensure user flow.
6. Form declared email input type as a type of text, changed it to email then included other fields such as id tags to link the label to the input as the form inputs were missing labels.
7. Added validations so that correct formats are enforced
8. I also included labels for all input types, a radio box for the communication type and a select type.
9. The button type attribute was not set.
10. The document had poor color contrast error, I fixed that tooThe footer was misaligned, and spacing across sections was inconsistent.
11. There were no Aria
12. The color contrast was poor, affecting accessibility, all colour combinations are accessible to contrast ratio greater than 4.5:1
13. The hero image had sizing issues with no limit to its width, when the web page expands it also expands covering the entire screen
14. The spacing was also not consistent and there was also alignment issues identified.
15. There were no responsive adjustments declared in the CSS file.
16. There were inconsistencies in the formatting and indentation of the pages.
17. The email in the footer should be a clickable link.
